GENERAL

INTRODUCTION.

THIS Handbook claims to be nothing more than a Digest of the results of the Census for England and Wales, 1901, condensed from the voluminous folios recently issued by the Census Office. In reducing these volumes, so elaborate in detail, to something less than a fiftieth part of their original bulk, many important Tables have been ignored, and others are exhibited in the most concise form possible. It is, however, believed that the present volume contains, in a convenient form, the main results of the Census. The Tables have been compiled by Mr. William Sanders, who has also prepared the introductory text, in which he has freely availed himself of the contents of the official Reports, and of compilations previously published.*

The task undertaken by the Registrar-General has been one of great magnitude, involving the apportionment of the country into thirty-eight thousand enumeration districts, with the simultaneous services of a like number of duly qualified enumerators; and the subsequent analysis of their voluminous Returns in a form convenient for tabulation.

The periodical Census enumerations of the population are of immense interest, whether considered from the point of view of the statesman, the political economist, the sociologist, the statistician, or the actuary. The interesting points arising for consideration and close study include the enumeration and growth of the population, as effected by rates of birth, marriage, and death, and also by the important factors of immigration and emigration; the steady movement from rural

* In particular, "Cheshire's Digest of the Census of 1851," and "Walford's Insurance Guide and Handbook" have been so referred to.

130101

districts to towns and cities, and the consequent aggregation of the population in families, and in colonies of workers, involving questions of sanitation, and of housing accommodation and over-crowding especially in our large cities ; the absorbing problems as to the rate of growth of the population, and the varying proportions of the two sexes ; and the comparison of these several results, not only with those deduced for earlier periods in our own country, but also with the numbers and ratios indicated in the records of foreign countries, and of our own Colonies and dependencies.

At each recurring Census, questions arise for consideration as to the modifications which might be introduced, in order to render the records more practically useful to the ever-widening body interested in their study. Prominent amongst the suggested changes, is the proposal, advocated by a Committee appointed by Parliament in 1890, that the Census should be quinquennial instead of decennial. The more frequent enumerations are already made in France and Germany, and in Queensland and New Zealand, amongst our own Colonies ; and the arguments in favour of a quinquennial Census are so strong and well supported, that it is earnestly to be hoped that the Census, inaugurated in the first year of the present century, may be continued regularly at intervals of every five years. The Census Committee of 1890 also recommended (*inter alia*) the establishment of a permanent branch of the Registrar-General's Department, for Census purposes ; and the passing by Parliament of an enactment of permanent operation bearing upon the matter.

The question of the tabulation of the results, so as to show the number in existence at each age, instead of in groups of ages, as at present, somewhat arbitrarily fixed, has also received much attention ; and Committees of the Institute of Actuaries and of the Royal Statistical Society, have not failed to press upon the authorities the extreme desirability of this much-needed reform in the mode of tabulation ; so important from the point of view of those dealing with questions of the rates of mortality and marriage of the population at different ages, and of old-age provision, and the like. The authorities have not yet seen their way fully to adopt the suggestions of those making these representations ; but it is satisfactory to learn that the late Registrar-General very kindly undertook to include, in the forthcoming detailed Report upon the Census, the enumeration, at

individual ages, of the population included in five selected districts of varying character, each with a population of 100,000. (See *Journal of the Institute of Actuaries*, Vol. XXXVII., Part III., p. 317.)

The adoption of cards—so useful in other statistical enquiries—for the Census records and tabulation, and also of electrical and mechanical appliances—successfully applied in Canada and the United States—will doubtless receive in due course the careful consideration of the Department entrusted with this important work.

THE CENSUS OF ENGLAND AND WALES, 1901.

I.—*The Number of the People.*

THE number of people in England and Wales, and the small adjacent islands, on April 1st, 1901, was 32,678,213.

The annexed table exhibits the distribution of the people :—

POPULATION OF ENGLAND AND WALES IN 1901.

	Males.	Females.	Total.
England	14,867,507	15,939,736	30,807,243
Wales	861,106	859,494	1,720,600
Islands in the British Seas ...	70,576	79,794	150,370
TOTAL	**15,799,189**	**16,879,024**	**32,678,213**

British subjects in Foreign States are not included in the general population, as given in the preceding table, the exiles and foreign subjects in England and Wales being considered as a set-off against them. The figures relating to the army, navy, and merchant service abroad, have not yet been published by the authorities.

"It is difficult," says Dr. Farr, in his elaborate report on the Census of 1851, "to form any just conception of these large numbers, for men are rarely seen in large masses, and, when seen, their numbers are seldom known. It is only by collecting, as in other masses, the units into masses, the masses into other masses, and thus ascending progressively to an unit comprehending all others, that the mind attains any adequate idea of such a multitude as a million of people. Thus from a file of *ten persons* which the eye takes in at one view, the mind readily conceives ten such groups or a *hundred*, and again ascending to ten hundred or a *thousand*; to ten thousand or a *myriad*; to ten myriads or a hundred thousand; and to ten hundred

thousand or a million—arrives at a conception of the millions within our shores on the night of the Census. Another way of arriving at this conception is by considering the numbers in relation to space; as, 4,840 persons might stand without crowding on the 4,840 square yards in an acre, 3,097,600 persons would cover a square mile (640 acres)"; and the thirty-two millions of people in England and Wales in 1901, allowing a square yard to each person, would thus cover more than ten square miles.

Striking as is the foregoing illustration of the number of persons in England and Wales, another, perhaps, is wanting to enable the popular mind adequately to appreciate *thirty-two millions of people.**

It is well known that to mass quantity is to conceal bulk; thus, the whole of the vast yields of the Californian and Australian goldfields, melted down into a solid mass of the precious metal, would only fill a tolerably-sized room; and so it is with numbers. A general, wishing to conceal the strength of his army, forms it into squares.

If all the people of England and Wales had to pass through London in procession, four abreast, and every facility was afforded for their free and uninterrupted passage, during twelve hours daily, Sundays excepted, it would take nearly four months and a half for the whole population to file through, at quick march, four deep. The length of this vast column would be 3,788 miles. To count them singly, at the rate of one a second, would take nearly two years and a half, assuming that the same number of hours daily were occupied, and that Sundays also were excepted. In order to count this mass in one day, 38,200 enumerators were appointed, each having a given district allotted to him.

Males and Females.—The number of the male population of England and Wales was 15,799,189, of the female population 16,879,024; consequently, the females exceeded the males in England and Wales by 1,079,835. To every 100,000 males at home in 1901, the females were 106,835; or there were 94 males at home to 100 females.

The proportion of males to females at the time of birth is, on an average, 103·5 of the former to 100 of the latter. This numerical

* *See* Cheshire's Digest of the Census of 1851.

advantage is, however, soon lost by the males, owing to the higher death-rates prevailing among them during infancy. It has vanished, as may be seen from the age-tables, by the end of the first year of life ; and at each subsequent age-period (with the exception of ages 14 and 15), the females in this country outnumber the males, and in increasing proportions. In a comparison, however, of the relative proportions of the sexes at any of the age-periods, allowance must be made for the tendency to mis-statement of age on the part of women, the obvious result of such mis-statement being that at the earlier periods, the proportion shown is higher, and at the later periods, lower, than would be the case if the true ages of women were returned.

Not less than 177,267 persons were of the age of 80 and upwards at the date of the Census. The youngest had attained the intelligent age of fourteen at the accession of Queen Victoria, so we may assume that there were living, at the date of the Census, nearly one hundred and eighty thousand persons who had observed all the vicissitudes of the national life throughout her glorious reign. A very noticeable circumstance is that more women than men survive to advanced ages ; of the 177,267 persons above-mentioned, 107,159 were women. It may be noted too, that a large proportion of those surviving at the older ages are married. Thus, of the women aged 85 and upwards, 3,625 were spinsters, while no less than 26,903 were either wives or widows.

The number that had passed the term of three score years and ten, and had not attained to four score years, was 710,813 ; and no less than 1,520,346 men and women were between 60 and 70 years of age in 1901, against 1,063,923 in 1871, or nearly half as many again. At the next earlier age group, 40–60, of which 50 is the middle point, the number recorded was 5,805,390. This period of life, 40–60, has been described as the intellectual age, the age of masters, the legislative, the judicial age. It is the mature age-period in social life, when the professional man attains his goal, the workman becomes a master, and the father sees his children assuming the responsibilities of their calling.

At the ages between 20 and 40, the active, the reproductive period, the numbers were 10,522,145.

At ages under 20—including the period of infancy, school life, and apprenticeship—the numbers were 13,791,882. This mass of youth represents the coming generation of English men and women.

In this connection, it should be mentioned that there were, in 1901, about two and three-quarter millions of young men between the ages of 15 and 25 in civil employ, none of whom were married. Should it ever come to pass that the country found itself obliged to resort to conscription for the purposes of national defence, we have here a huge and ever-increasing reserve, a tremendous auxiliary force, as we may term it, on which to draw. The "probable life-time" * at birth of a male in England and Wales is about 44 years, and of a female, 47 years; for, as by that time, a given number born is reduced by one-half, the chances of their attaining, or of their not attaining, that age, are equal. This "life-time," however, varies considerably in different parts of the country. In certain manufacturing districts it is as low as 28 years, whereas in the healthy county of Surrey it is above the average for the whole country, or 46 years. An amelioration in the conditions of life, whether by the application of sanitary measures, or any improvement in the methods by which the worker's task is accomplished, is marked by a rise in the average duration of life, and there is good ground for supposing that the march of civilization, involving a closer and better knowledge of the conditions under which we can obtain the greatest natural advantages, must result in increasing the natural life-time of the race. Experience teaches us to understand and avoid the errors of former generations of men, the wise direction of science enables us to combat with the social evils that surround us, and since the well-being of the nation is the supreme charge of a humane Government, the effect of every well-devised social measure tends, directly or indirectly, to the fostering of human life.

II.—*Births and Birth-places of the People.*

The births in England and Wales average about 915,000 per annum, and exceed the deaths by nearly 360,000. This is "the natural increment of the people," compared with which the gain by immigration, or the loss by emigration, may be ignored. During the ten years from 1891 to 1900 there were born in England and Wales

* This is the *vie probable* of French writers, which is quite distinct from the average lifetime, or expectation of life at birth; the latter function being deduced from the numbers surviving, at all successive ages, out of a given number born.

4,657,871 males and 4,497,292 females; consequently, 103,571 boys were born to every 100,000 girls; or, speaking in smaller numbers, nearly 104 boys to 100 girls. As we have already pointed out, this disproportion is soon reduced by the higher infant mortality among male children, so that among the numbers living at the Census of 1901, the females preponderate.

In the year 1901, the births registered in England and Wales were 929,807; of these 893,608 were the children of *married*, and 36,199 of *unmarried* women or widows. The number of married women of the child-bearing age, viz., 15 to 45, was returned as 3,803,942 in that year, and of unmarried women, including widows as well as spinsters, 4,316,905. The above figures thus give to each 1,000 of married women 235 children born annually; and to each 1,000 unmarried women, 8 born annually.

It is interesting to notice the districts in which the greatest number of illegitimate births take place. In London, so much abused on the score of immorality, the illegitimate births were only 3·7 per cent. of the total births, taking an average of the ten years, 1891–1900, while in the County of Shropshire the proportion was 7·2, in Hereford 7·0, and in Cumberland 6·9 per cent.

The Census enquiry into the birth-places of the people furnishes some curious facts. Above 96·1 per cent. were born in England and Wales; 1·0 in Scotland; 1·3 in Ireland; 0·1 per cent. in the islands of the British Seas; 0·4 in the British Colonies; while about 1·0 per cent. were subjects of Foreign States, and naturalized British subjects. Not less than 3,946 persons enumerated were born at sea.

Speaking of London only, of its 4,536,541 inhabitants, 56,605 were born in Scotland; 60,211 in Ireland; 5,549 in the islands of the British Seas; and 33,350 in the British Colonies. 3,016,580 were born in London, while 1,202,072 were of provincial birth. No less than 952 were born at sea. Finally, British subjects, naturalised British subjects, and foreigners, make up the grand total.

The number of foreigners resident in London at the enumeration was 135,377. The following table exhibits their distribution among the countries of the world. It will be seen that the Metropolis comprises representatives from almost all parts of the habitable globe.

FOREIGNERS RESIDENT IN LONDON IN 1901.

Country where Born.	Number of Residents in London.	Country where Born.	Number of Residents in London.
Austria	6,189	Russia	38,117

Poland (Russian)	15,420		
Portugal	128		

"Notwithstanding the great disturbance produced in the natural distribution of the population by the constant migration from agricultural to industrial districts, or, speaking generally, from country to town, the native population shows, after all, stationary habits of a very decided character. Of the natives of England and Wales who were in the country at the time of the Census, no less than 75·19 per cent. were enumerated in their native counties. In 1871 the proportion of stationary natives, as we may call them, was 74·04 per cent., or nearly the same; so that it appears that the increased facilities of locomotion, and the extended knowledge among the working classes as to the conditions of life in parts outside their immediate localities, have not had the result that might have been anticipated, or leading to greater migration. Comparing the two sexes in this respect, it appears that women are on the whole more migratory than men, probably in consequence of the demand in towns for domestic servants from the country." We quote from the General Report on the Census of 1881. The percentage of stationary natives in 1901 was 70·76.

The counties that showed an actual decline in population since 1891 were Hereford, Oxford, Rutland, Westmorland, in England, and Cardigan, Merioneth, Montgomery, and Pembroke in Wales. In Huntingdon the increase was only 10.

The Registrar-General's Annual Report shows that in every county of England and Wales, without exception, the births have

exceeded the deaths during the decennium 1891–1900, so that in the counties where decline is shown, the natural increment, in some cases very slight, is counteracted by migration. One cause of this diminution is the low proportion of wives of the reproductive age to the general population of the counties, and as far back as 1881, three of the counties quoted above, viz.: Hereford, Cardigan and Pembroke were noted in this connection. The surplus population of these counties goes to swell the numbers around the industrial centres of the manufacturing and mining counties.

The subjoined table shows the increase or decrease in population in the ancient or geographical counties, together with the percentage of natives enumerated.

Counties showing **Increase.**	Increase per cent. 1891–1901.	Percentage of Natives enumerated	Counties showing **Increase.**	Increase per cent. 1891—1901.	Percentage of Natives enumerated.	Counties showing **Decrease.**	Decrease per cent. 1891—1901.	Percentage of Natives enumerated.

III.—*The Conjugal Condition of the People.*

About 240,000 marriages take place in England and Wales every year, the number increasing with the growth of the population, but occasionally fluctuating from a variety of causes. In 1891 the marriages were 226,526, while in 1901 they were 259,400, showing an increase of no less than 32,874 in ten years, or 3,287 per annum.

Of the 259,400 marriages in 1900, 234,178 were those of bachelors, and 25,222 of widowers. Of the 259,400 women, 240,807 were spinsters, and 18,593 were widows. The marriage-rate sensibly declined in England and Wales between 1851 and 1890, but rose in the following decennium.

The average marriage-rate (persons married to 1,000 living)

for the years		1851–60	was	16·9.
„	„	1861–70	„	16·6.
„	„	1871–80	„	16·2.
„	„	1881–90	„	14·9.
„	„	1891–1900	„	15·6.
„	„	1901	„	15·9.

The following table exhibits the rise in the mean age at marriage:—

	Men.	Women.
1867–1870 (four years)	28·0 ...	25·7
1871–5	27·9 ...	25·7
1876–1880	27·9 ...	25·7
1881–5	28·0 ...	25·7
1886–1890	28·3 ...	26·0
1891–5	28·4 ...	26·2
1896–1900	28·4 ...	26·2

In 1867–1870 more than 30 per cent. of the people married did not state their ages, but there has been a gradual improvement until in 1900 the proportion had fallen to 1¼ per cent. The mean ages of the earlier periods are difficult to obtain, from the fact that the exact age at marriage was not in all cases stated, "full age" being considered a sufficient description.

The number of husbands within our shores on Census night was 5,611,381, and, of wives, 5,717,537. The disparity in the numbers may be partly explained by the war in South Africa draining the country of a large body of married men; compared with their number, the number of husbands abroad on civil business would be very slight.

Of the enumerated wives, 3,803,942 had not completed their forty-fifth year, which, disregarding the occasional exceptions, may be considered the limit of the reproductive period in women.

The women included in this period, 15 to 45 years, were divided

in 1901, into unmarried, 4,133,322; wives, 3,803,942; and widows, 183,583. The wives and the widows together thus numbered 3,987,525.

The proportion of married persons to the adult population, 15 years of age and upwards, in 1901 was 51·8 per cent. The widowers of all ages, 550,330, were to the husbands as 1 to 10, and the widows to the wives as 1 to 5 nearly. The total number of widows of all ages was 1,246,407.

"We must conclude that celibacy, as well as marriage without children, is to be considered the natural state of a portion of the population; for under no circumstances that can be conceived will the whole of the people marry. Certain duties of the most exalted as well as of the humblest kind are most efficiently performed by these classes; and although the proposition, that 'the best works and of greatest merit for the public have proceeded from the unmarried or childless men' may not be absolutely true, as it is put by Bacon, they have unquestionably contributed their full share to public works, which often absorb the powers of mind to an extent that might embarrass him that 'a wife and children has given hostages to fortune.' There is also evidently a large number of both sexes in this class who from infirmity and diseases, either acquired or hereditary, cannot marry, and some who have a total disinclination to marriage." Dr. Farr's Report on the Census of 1851.

There is a geographical distribution of spinsters as well as an age distribution. In the Home counties they are generally in excess of the bachelors, and so, too, in those counties where women may take their part in the staple industry. In Surrey, the unmarried women 25 and upwards are nearly 12,000 in excess of the bachelors, while in South Wales the bachelors 25 years and upwards are 18,429 in excess of the spinsters. The supply of domestic servants would seem to be recruited from certain agricultural counties, where, as we might expect, the resident spinsters are in the minority. We might instance Kent, Wiltshire, Rutland, Lincolnshire and Huntingdonshire; whilst in Bedfordshire and Cambridgeshire the difference in the numbers of the sexes is only slight. Hastings has an excess of 6,000 spinsters, Brighton of 6,300, whilst Northumberland, Durham, Cumberland and South Wales, and in the Metropolis, Bermondsey, Bethnal Green, Finsbury, Poplar, Southwark, Stepney and Woolwich show a striking preponderance of bachelors of marriageable ages.

IV.—*Families and Houses.*

We have hitherto been considering *individuals*; we will now examine aggregations of individuals into families.

The term "family" may be defined in various ways. It consists of a head, and dependent members, living together in the same dwelling. But the head of the family may be either a husband and wife, a widower, a widow, a bachelor, or a spinster; and the members may be children, relations, visitors, and servants.

It is so natural that a family should live in a separate house, that the term house is often used for family. This isolation of families in separate houses is carried to a greater extent in England than elsewhere. A German naturalist, Dr. Carus, the physician to the King of Hanover, in a description of the English people in 1844, has the following remarks on English houses:—

"I cannot take leave of the subject without a remark on English dwellings, which stand in close relation with that long-cherished principle of separation and retirement lying at the very foundation of the national character. It appears to me to be this principle which has given to the people that fixity of national character and strict adherence to the historical usages of their country by which they are so much distinguished; up to the present moment the Englishman still perseveres in striving after a certain individuality and personal independence—a certain separation of himself from others, which constitutes the foundation of his freedom. It is this that gives the Englishman that proud feeling of personal independence which is stereotyped in the phrase, 'Every man's house is his castle.'

"The expression, however, receives a true value when, by the mere closing of the house-door, the family is able, to a certain extent, to cut itself off from all communication with the outward world, even in the midst of great cities. In English towns or villages, therefore, one either meets with small detached houses, merely suited to one family, or apparently large buildings, extending to the length of half a street, sometimes adorned like palaces on the exterior, but separated by partition-walls internally, and thus divided into a great number of small high houses, for the most part three windows broad, within which, and on the various stories, the rooms are divided according to the wants or convenience of the family; in short, therefore, it may be

properly said that the English divide their edifices *perpendicularly* into houses, while we Germans divide them *horizontally* into floors. In England, every man is master of his hall, stairs and chambers, whilst we are obliged to use the two first in common with others."

We quote the above observations from the Census Report, 1851, because, as will be seen, they are almost as apposite to-day as at the date when written; although there seems, of late years, to be a growing disposition, at least among Londoners, to favour the horizontal arrangement (in flats), rather than the perpendicular (in houses).

The total number of inhabited houses in England and Wales was 6,260,852, which, compared with 5,451,497, the total for 1891, shows an increase of 14·87 per cent., which is higher than the rate of increase of population during the past ten years, 12·17 per cent.

The average number of occupants to each inhabited house was 5·20, as compared with 5·32 in 1891, 5·38 in 1881, and 5·33 in 1871. This decline is probably in part the natural result of the decrease in the mean proportion of persons to a family, but may also indicate some tendency to diminution in overcrowding.

In spite of the growth of houses during the decennium, we have, nevertheless, to deplore the continuance of "overcrowding"—one of the evils of our social system. A reference to Table XVIII. shows to what extent it exists in our midst at the present day. For example, there were 19 cases in which 10 people occupied one room, 10 cases where 11 persons occupied one room, and 8 cases where 12 or more persons dragged out their existence within the four walls that enclose the space which we must, perforce, designate as a "room." Not less squalid are the conditions, even when we consider the tenements of two and three rooms. There is a popular impression that overcrowding is essentially an evil of town life. So far from that being the case, the figures relating to the rural districts exhibit an alarming state of affairs, having regard to the fact that, by reason of their remoteness, they are without the modern methods of sanitation. Our only consolation is that a comparison of the figures of 1891 and 1901 shows amelioration all along the line, and we are sanguine that legislative measures and the activity of municipal authorities are tending to the diminution of this tremendous evil.

V.—*Density of the Population.*

The density of the population may be expressed in several ways; by allotting the amount of space available for each person, or by stating the number of persons to a square mile, or the equal distance that would separate each individual from his neighbour.

The gradual increase of density of population in England and Wales, at each successive Census, is shown by these three methods in the following table :—

Date of Census.	Persons per Square Mile.	Acres per Person.	Proximity in Yards.
1801	153	4·19	153
1811	175	3·66	143
1821	206	3·10	132
1831	239	2·68	122
1841	274	2·34	114
1851	308	2·08	108
1861	345	1·86	102
1871	390	1·64	96
1881	446	1·43	90
1891	497	1·29	85
1901	558	1·14	80

As would be assumed, the density varied considerably in different parts of the country. Confining ourselves to a consideration of county areas, and excluding the metropolitan counties, we find at one end of the scale Cardigan, Westmorland, Brecknock, Merioneth, and Radnor, in which mountainous or secluded parts there were from 7 to 13 acres to a person, and at the other end, Lancashire with one-third of an acre, and Staffordshire and Durham with a little more than half an acre, to each of its inhabitants.

At the date of the 1901 census there were, on an average, 558 persons to a square mile; and if the population had been uniformly distributed, each person would, on an average, occupy 1·1 acres, and the equal distance between any two neighbours would have been 80 yards.

VI.—*Towns.*

Two general laws appear to operate upon the location of families, one tending to their uniform distribution, the other to their condensation round certain centres; thus families cluster round a certain point, and villages are formed. In conformity with the same law, these villages form round other centres, and towns are formed; and these, again, at wider intervals, round other centres, and cities are formed

For the purposes of local government, England and Wales are divided into "County Boroughs," "Municipal Boroughs," "Urban Districts," and "Rural Districts," and this division was adopted at the last Census. The "urban population" consists of the inhabitants of London, of the County Boroughs, of the Municipal Boroughs, and of the Urban Districts, and the "rural population" of the remaining inhabitants of England and Wales, except a small population living in areas which are neither urban nor rural. The population in 1901 of the 1,122 urban districts (considering London as one, although including within itself 29 Metropolitan Boroughs) was 25,058,355. Of this total there were 9 districts, each of which contained more than 250,000 inhabitants. In 24 districts the numbers were between 100,000 and 250,000; in 42 districts it was between 50,000 and 100,000; in 141 districts, between 20,000 and 50,000; in 219 districts, between 10,000 and 20,000; and in 472 districts, between 3,000 and 10,000; whilst in the remaining 215 districts it was under 3,000.

Comparing these figures with those of the previous census, there is a marked decrease to be noted in the districts where the population is less than 10,000, pointing to the decay of certain small towns. A certain proportion of towns have acquired an adventitious but extraordinary importance and magnitude, having been created and sustained by special circumstances, either as places of public resort, as watering-places, or ports, or seats of mining and manufacturing enterprise. Such, for example, are Brighton, Bournemouth, Hastings, Portsmouth and Plymouth; Liverpool, Manchester, and many other large towns in Lancashire; Birkenhead, Grimsby, Newcastle-upon-Tyne, and Merthyr Tydfil. Several of these were once villages; but with the progress of industry, the extension of commerce, the increase of wealth, and the aggrandisement of empire, they have grown, and, in some cases, have almost attained a metropolitan character.

London extends over an area of 74,839 acres, or nearly 117 square miles, and the number of its inhabitants, rapidly increasing, was 4,536,541 on the date of the Census. A conception of this vast mass of people may be formed from the fact that, if the metropolis was surrounded by a wall having a north gate, a south gate, an east gate, and a west gate, and each of the four gates was of sufficient width to allow a column of persons to pass out freely *four* abreast, and a

peremptory necessity required the immediate evacuation of the city, it could not be accomplished under *thirty-six hours*, by the expiration of which time the head of each of the four columns would have advanced a no less distance than one hundred and twelve miles from their respective gates, all the people being in *close* file, *four* deep. The head of the column moving north would have reached Lincoln while the last file was passing out of the London gate.*

Before quitting the subject of towns it should be mentioned that the Registrar-General's Weekly Return of Births and Deaths is based upon the Mortality Experience of London, and 75 other great towns of England and Wales, representative in character, and whose total population, estimated to the middle of 1903, is 15,075,011, or nearly half the total population of the country. The results obtained from the weekly returns of these towns give a very fair indication of the health of the country. The facts regarding London are treated more in detail, a page being devoted, week by week, to an analysis of the causes of the deaths in the Metropolitan area. The Astronomer Royal provides, too, the results of the meteorological observations for the same period.

A *résumé* of this slight publication appears, week by week, in most newspapers, and it suffices for the general reader. Those, however, who are more particularly interested in the Weekly Bill of Mortality, may obtain it directly from the official publishers for the modest sum of three halfpence.

VII.—*Public Institutions.*

It will be seen from Table XV. of the Appendix that in the Public Institutions proper, the total number of occupants was 436,836, of whom 58,432 were officials and their families; so that there were nearly seven inmates to one official, a member of his family, or servant.

The excess of males over females is chiefly exhibited in barracks and prisons; in the latter, from the fact that crime is largely more prevalent among men than among women. There were five men to every woman in prison at the Census of 1901. In the workhouses, the males are in excess of the females, but in the lunatic asylums the females preponderate. See Table XIV., Appendix.

* *See* Cheshire's Digest of the Census of 1851.

VIII.—*Deaths—Their Number and Causes.*

The deaths in England and Wales are about 550,000 annually increasing with the population, and fluctuating very slightly. During the two years 1900–1, the total deaths were 1,139,415, being at the rate of 1,561 *daily*, or 65 hourly, or rather more than 1 a minute. Taking an average for the ten years 1891–1900, the annual death-rate per thousand of the population was 18·2. In Surrey it was 14·5, while in Lancashire, with a vast industrial population, it was 21·1.

The mortality is highest in winter, and lowest in summer, varying, however, slightly in different districts. When this order is reversed the cause is some epidemic, such as diarrhœa, which is most fatal in the summer season of the year.

In the Registrar-General's Annual Reports, 1896 to 1900, the causes of death in England and Wales were arranged under the following heads or classes.

Causes of Death.	Years.				
	1896.	1897.	1898.	1899.	1900.
All Causes	526,727	541,487	552,141	581,799	587,830

15. ,, Digestive System ...	34,741	38,568	41,425	45,125	39,532
16. ,, Lymphatic System and Ductless Glands	758	785	866	881	910
17. ,, Urinary System	13,701	14,340	14,598	15,374	15,888
18. ,, Reproductive System—					
(*a*) Diseases of Organs of Generation	1,380	1,428	1,343	1,392	1,311
(*b*) ,, of Parturition	2,508	2,414	2,367	2,418	2,514
20. ,, Organs of Locomotion ...	1,547	1,566	1,395	1,457	1,367
21. ,, Integumentary System ...	1,904	1,902	1,908	1,966	2,146
22. Accident or Negligence	16,858	17,517	17,084	18,665	17,967
23. Battle	...	...	...	...	16
24. Homicide	301	292	307	291	278
25. Suicide	2,656	2,792	2,877	2,844	2,896
26. Execution	20	7	10	15	14
27. Ill-Defined and Not Specified Causes	22,603	23,057	23,039	23,115	23,172

At the commencement of 1901 an important departure was made in the method of classification of diseases. The following table shows the total deaths registered in England and Wales in 1901, discriminating the sexes, and setting out the causes of death according to the new classification, then first published in the official Returns.

YEAR 1901.

Causes of Death.	All Ages.	
	Males.	Females.
All Causes	285,618	265,967
1. Epidemic Diseases	38,296	35,970
2. Syphilis, &c.	1,365	785
3. Septic { Puerperal	...	2,079
3. Septic { Others...	1,632	1,378
4. Tuberculous Diseases	32,881	26,049
5. Parasitic Diseases	175	173
6. Alcoholism	1,942	1,417
7. Cancer, &c.	16,692	22,379
8. Premature Birth, &c.	15,842	12,400
9. Diseases of Nervous System	23,044	18,490
10. ,, Organs of Special Sense	578	505
11. ,, Heart	22,684	25,538

22. Ill-defined ,, ...	24,830	26,414
23. Not specified ,, ...	672	436
24. Accident	12,041	5,271
25. Battle	4	...
26. Homicide	161	175
27. Suicide	2,318	803
28. Execution	15	...

The violent deaths (Nos. 22–26), as will be seen, were in 1896 to 1900 about one-fifth in number of the Constitutional diseases (No. 9), that is to say, the diseases to which flesh is heir, the chief of which are those scourges, cancer and phthisis; and it would appear that violent deaths in England have at all times been higher than in the other countries of Europe from which returns have been obtained. In 1901—the most recent year for which we have complete returns at hand—the violent deaths from "evident external causes" were no less than 20,788, and, of these, 14,539 were males, and 6,249 females.

The total number under the heading "Accident or Negligence" was made up from the following causes:—1,017, from accidents in mines and quarries; 2,690, killed by vehicles and horses; 334, from accidents on ships, boats and in docks; 185, while on building operations; 216, in connection with machinery; 149, from weapons and implements; 2,754, from burns and scalds; 515, from poisons and poisonous vapours; 2,764, by drowning; 1,964, from suffocation; 2,810, from falls; 437, from weather agencies; and 1,477, where the nature of the accident could not be precisely ascertained. There were 4 deaths from "battle," being, as in the previous year, those of soldiers returned from the South African War, and the causes were attributed to injuries received in action.

It has been predicted, and it is certainly to be hoped, that by improvement in the education and industrial training of manual labourers in the mechanical arts, rendering processes and engines safer, and by moral, religious, and physical training of intellectual labourers, the number of violent deaths may be somewhat reduced. The reckless indifference displayed by miners to loss of life has made them the object of stringent legislation, and, in a less degree, the operatives in factories are guarded against their own carelessness by a wise application of the Factory Acts. The deaths from indigence, or want of food, are happily not so numerous with us as in other countries. This is the more to be noted from the circumstance that the climate, as well as the occupations of the great body of the working classes require a steady supply of nutritious food.

The effect of *mental suffering* in accelerating the ratio of mortality has attracted the attention of several writers.* In one of the Registrar-General's early Annual Reports, he says:—"The life of a man bears a certain proportion to its happiness. A miserable life is soon extinguished; violent lives end abruptly; the life of a good, wise people approaches its natural term." This remark leads directly to the subject of suicides. These, unfortunately, do not appear to decrease with the progress of population, but rather to increase. The greatest proportion of our suicides are in the middle and upper classes; hence, the poorer the district, the fewer the suicides. It may be added that, wherever statistics on the subject are available, it is always shown that suicide is less general among Roman Catholics than among

* *See* Walford's Insurance Guide and Handbook.

Protestants. The ages at which the greatest number of suicides are shown are those between 25 and 55. It is also remarkable that, while the proportion of crime is four times greater among the males than among the females, the proportion of suicides is only three times as great. The numbers in 1901 were—males, 2,318, and females, 803.

IX.—*The Occupations of the People.*

A laborious part of the Census was that which was concerned with the occupations of the people. The variety of manufactures and industries, the complicated relations existing among the operatives in the production, and, in hundreds of cases, the impossibility of determining the precise nature of the employment from the mere designation, have all combined to make the tabulation a work of immense difficulty. We take from the Census Report of 1881 a few of the "occupations" that appeared on the Schedules, and leave it to the reader to imagine how, without a special knowledge implying an acquaintance with every trade pursued in the country, the Commissioners could possibly classify them.

All-rounder.
Baubler.
Brazil maker.
Camberel maker.
Chevener.
Crowder.
Dasher.
Dirt refiner.
Doctor maker.
Egger.
Fluker.
Forwarder.
Glan rider.
Horse marine.
Impression maker.
Kell bulley.
Lurer.
Moleskin shaver.
Oliver man.
Orange raiser.
Paste filter.
Ponty sticker.
Ransacker.
Sand badger.
Shore woman.
Spragger.
Tawer.
Tharme maker.
Toother.
Walk Flatter.
Westernman.
Whim driver.

The abstracting clerks could not, of course, be expected to know the meaning of such names as these, and consequently it was necessary to make a dictionary for their use. Many terms in the work of

reference employed at former Censuses had become obsolete, and thousands had sprung up that were entirely new. By assiduous applications to the leading manufacturers, asking for information as to the designations used in all the branches of their industry, a list of nearly 12,000 specific occupations was formed, since augmented at the Census of 1891, and again in 1901.

In the preface to the Census Report on London, 1901, the Commissioners state that, as a result of a conference with the Home Office and the Board of Trade, the classification of the occupations was, to a great extent, re-cast to bring the Census statistics more in harmony with the statistics issued by those departments, thus rendering a comparison with the results of previous censuses more difficult. The attempted separation of dealers from makers, and of skilled artisans from labourers, may be noted as a new feature, while a new column for a return of persons stated to be working "at home" was inserted, at the request of the two Departments before mentioned.

For the first time, the married women and widows engaged in occupations are distinguished from the single women. In 1891, the children and youths between the ages of 10 and 15 were grouped together, but at the last Census they were grouped at ages between 10 to 14, and between 14 to 15.

Of the total population of England and Wales, 32,527,843, there were no less than 14,328,727 persons engaged in occupations. The children under 10 constitute one-fourth of the entire population, and if we exclude them from the reckoning, we may say that 59 per cent. of the nation are workers.

The total of the male workers of all ages from 10 and upwards, was 10,156,976. Of the youths under 15, 365,205 were occupied, as against 1,305,765 boys of the same ages, who had not entered on the serious business of life. Going to the other extreme, we find that there were 71,362 men aged 75 and upwards still toiling.

There were 168,238 of the army and navy, effective and retired, classified as engaged in the defence of the country. Of this number, 17,912 were officers, while the men on active service numbered 150,326. The clergy of the Established Church were 25,235, Roman Catholic priests, 2,849, and monks, 239. The ministers of other religious bodies, including missionaries and scripture readers,

numbered 16,865. Thus there were 45,188, all told, of the clerical profession. The total of physicians, surgeons and medical practitioners was 22,486, and if we admitted that the supply is governed by the demand, it would seem that the spiritual needs of the country has twice the importance of its physical ailments. As a correction to any hasty conclusion on this point, it should, however, be mentioned that the police of the country are 44,904 in number, or only slightly less numerous than the clerics. Barristers and solicitors numbered 20,998. Teaching was the occupation of 61,899, while literary and scientific men were 14,428 in number. Engineers and surveyors comprised 17,466, and, lastly, art, music, and the drama were represented by 64,293.

The male domestic servants, indoor and outdoor, were 304,195 in number.

Of the 530,685 engaged in commercial pursuits, 307,889 were business clerks, 31,049 were distinguished as bankers and dealers in money, and 55,013 were associated with insurance in all its branches.

Railway employés of all grades numbered 351,911. Agriculture claimed 1,071,040, and 800,179 were occupied in and about, and dealing in the products of mines and quarries. Those engaged in "dress," a term that includes every article of apparel, numbered 414,637.

It would be impossible in a work of this scope to attempt a detailed description of the main industries of the country, and those who are particularly interested in any occupation are referred to the Summary Tables issued by the Census Commissioners, where a vast amount of information may be gathered from the pages, more than sixty in number, devoted to an elaborate analysis of the occupations of the people.

The total number of *women and female children* engaged in occupations was 4,171,751, and of these, 917,509 were married or widowed. No less than 16,074 were employed in some capacity under the Crown. Female missionaries, readers, and preachers were 4,803 in number, and there were 6,219 nuns and sisters of charity. Lady physicians, surgeons, and general practitioners numbered 212, and of these 45 were married women or widows. We may note, too, that 172,873 were engaged in teaching, while 1,951 followed literary and scientific pursuits.

Of the four million occupied women, no less than 1,690,722 were engaged in domestic services. The nearest approach to these figures was in "dress," the occupation of 710,961, and 663,222, in the production of "textile fabrics," including mill and factory hands of every description.

Compared with the number of women, 3,945,580, engaged in occupations in 1891, there has been an increase of 155,521 during the past ten years.

There was a slight falling-off in the number engaged in domestic service, while the female commercial clerks, which were 17,859 in 1891, rose to 55,784 in 1901.

We have referred the scientific reader to the Registrar-General's complete Occupation Tables, a monument of patient work, where may be seen, as in a hive, the whole vast population of England and Wales, workers and drones, in all their inter-relations in the promotion of human and industrial conditions of life. We trust, however, that the few pages we have devoted to the subject in our Tables, sufficiently indicate the national importance of the work undertaken, and brought to so successful an issue, by the Commissioners. (See Tables XXIII.-XXVIII.)

X.—*Infirmities.*

(*a*) *The Blind.*

The total number of persons returned as afflicted with blindness in 1901 was 25,317, or one blind person in every 1,285. No less than 4,621 were so afflicted from birth. The proportion of the blind to the population shows a steady decrease at every Census. Thus, in 1851, one in every 979 was blind, and if that proportion had been maintained, there would now be 7,909 more persons now living afflicted with blindness than there really are. This vast improvement is to be attributed to surgical science, and also to the diminished prevalence among children of such diseases as small-pox, to which a certain amount of blindness was formerly due. The males afflicted with blindness were in excess of the females, the numbers being, males, 13,136, and females, 12,181. This disparity may be accounted for by the differences existing between the two sexes in regard to their

occupations, exposure to accidents, and liability to disease. That it does not arise entirely from the stress of industrial life may be seen from the fact that in Devonshire, 446 were found to be blind, the affliction having visited them at some period after childhood, while in Lancashire the number was 1,204. The one county is mainly agricultural, the other a hive of human industry, where all the conditions of life are hampered by artificial considerations; and, moreover, while Devonshire has a population of less than half a million, Lancashire has nearly two millions.

The tables show that the affliction is no bar to active employment, for no less than 5,676, aged 10 years and upwards, were engaged in some occupation; of these 1,029 were women and girls. Among the men, there were 29 blind clergymen, 100 schoolmasters, and 534 blind musicians, music teachers, and singers. Glancing down the figures we see that willow, cane, rush and basket work occupied 184 women and girls, while dress, and fancy work generally, accounted for nearly half the blind women. Of the professional occupations, there were 69 blind lady musicians, music teachers, and singers, and no less than 53 teachers, schoolmistresses, and lecturers.

(*b*) *The Deaf and Dumb.*

The deaf and dumb returned numbered 15,246; of these, 6,569 were so afflicted from childhood. Allowance must be made for the fact that in a large number of cases the solicitous parent, while conscious of the infirmity in the child, was hopeful that it would be of a temporary character, and not to be publicly acknowledged. The deaf numbered 18,507. We have no encouragement to point to any improvement in the proportion of the deaf and dumb to the population, as in the case of blindness. On this subject we shall await the verdict of the Census Commissioners, to be issued, presumably, in their final and general report.

Not less than 6,665 of the deaf mutes were engaged in some occupation. In domestic services of all kinds the number was in excess of that of the blind similarly engaged, but it was in the manufacture of articles of dress that the difference was greatest, especially among the women, for here, as may be imagined, the sense of sight is indispensable.

On the other hand, while there were 2 deaf and dumb brokers, agents, or factors, the number of the blind of this class was 212, and while 8 commercial clerks were deaf and dumb, no less than 32 were blind.

(*c*) *The Insane.*

Persons of unsound mind were returned in the schedules of 1901 as lunatic, imbecile, and feeble-minded, and to discover the proportion suffering from congenital mental deficiency, the words "from childhood" were to be added wherever that was the case. The total number of lunatics, feeble-minded, and insane returned in 1901 was 132,654, the males being 62,063, and the females 70,591 in number, or there was one person of unsound mind to every 245 of the population. The lunatics and imbeciles of both sexes in institutions, public and private, numbered 90,407; the idiots and imbeciles, that is, persons suffering from congenital or chronic forms of mental disease resided mostly at home with their families, and were included in the householders' schedule. These were 42,247 in number in 1901. It is plain that, while the number of lunatics and imbeciles in institutions could be easily ascertained, all motive for concealment being absent, the natural unwillingness of parents and others to disclose the existence of idiotcy in their families must necessarily affect the accuracy of the figures relating to the large portion of the total insane residing at home.

APPENDIX.

LIBRARY OF THE UNIVERSITY OF CALIFORNIA

TABLE I.

POPULATION AND NUMBER OF HOUSES IN ENGLAND, WALES, AND THE ISLANDS IN THE BRITISH SEAS, respectively, in 1901.

	POPULATION.			HOUSES.

TABLE IV.

ADMINISTRATIVE COUNTY OF LONDON (including CITY of LONDON). —POPULATION at each SUCCESSIVE CENSUS with INCREASE per cent. of POPULATION during each INTERCENSAL PERIOD.

Census Year.	POPULATION.	Increase per cent. during preceding Intercensal Period.	Census Year.	POPULATION.	Increase per cent. during preceding Intercensal Period.
1801	959,310	—	1861	2,808,494	18·8
1811	1,139,355	18·8	1871	3,261,396	16·1
1821	1,379,543	21·1	1881	3,830,297	17·4
1831	1,655,582	20·0	1891	4,228,317	10·4
1841	1,949,277	17·7	*1896*	*4,429,529*	—*
1851	2,363,341	21·2	1901	4,536,541	7·3

NOTE.—By the London Government Act, 1899, the area of the Administrative County of London was thus altered; besides certain other rectifications of boundary which involved very slight changes, the Civil Parish of Penge was severed from the County, as was also a detached part of Clerkenwell situated at Muswell Hill, while the Civil Parish of South Hornsey, formerly part of Hornsey Parish, was added to the County. The population of South Hornsey prior to 1881 is not known, but an estimate has been made for each of the earlier periods, the figures for which are therefore to this slight extent only approximate.

* In London a special intermediate Census was taken in 1896. The Parish of South Hornsey did not then form part of the Administrative County, but an estimate for this Parish is included in the figures for that year. The increase of population per cent. in the present area of the County in the five years 1891-96 was 4·8, and in the succeeding five years it was 2·4 on the population of 1896.

TABLE V.

POPULATION AND NUMBER OF HOUSES IN ENGLAND, as enumerated at each Census from 1851 to 1901 inclusive.

Years.	POPULATION.			HOUSES.

[1] Sheffield Parliamentary Borough was, at the date of the Census, co-extensive with the County Borough of the same name; but, on 31st October, 1901, certain areas were added to the County Borough, which for Parliamentary purposes are included in the Hallamshire and Rotherham Divisions of Yorkshire and in the North Eastern Division of Derbyshire.

[2] South Shields Parliamentary Borough was, at the date of the Census, co-extensive with the County Borough of the same name; but, on 9th November, 1901, an area was added to the County Borough, which for Parliamentary purposes is included in the Jarrow Division of Durham County.

[3] Stockport Parliamentary Borough was, at the date of the Census, co-extensive with the County Borough of the same name; but, on 9th November, 1901, certain areas were added to the County Borough, which for Parliamentary purposes are included in the Stretford Division of South East Lancashire, and in the Altrincham and Hyde Divisions of Cheshire.

TABLE XII.

COUNTY BOROUGHS, MUNICIPAL BOROUGHS, and other URBAN DISTRICTS.—
AREA; HOUSES 1901, and POPULATION 1891 and 1901.

NOTE.—Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked * have been created, the boundaries of those marked † have been altered, and the names of those marked ‡ have been changed between the Censuses of 1891 and 1901. The figures in the body of the Table for both 1891 and 1901 relate in every case to the area as constituted at the date of the Census of 1901 (31st March). The Urban Districts are arranged alphabetically, those having compound names being placed in the order indicated by the usual pronunciation of those names; thus East Cowes will be found under the letter E, and Lower Bebington under the letter L. The City of London, and the Metropolitan Boroughs (arranged alphabetically), are shown under "London."

* In this, and all succeeding Tables, it should be explained that each age group represents the number who have attained the age indicated at the head of the respective columns, but have not reached the next higher age. Thus, there were in England and Wales, at the date of the Census, 2,145,383 persons aged 35 and upwards, but less than 40; 1,850,622 who were aged 40 and upwards, but had not attained the age of 45, and so on.

TABLE XX.

AGES OF PERSONS, MALES AND FEMALES, IN ENGLAND AND WALES, AND IN THE AGGREGATES OF URBAN AND RURAL DISTRICTS RESPECTIVELY, 1901.

TABLE XXX.

The BLIND, the DEAF and DUMB, the DEAF, and the INSANE in ENGLAND and WALES.—CONDITION as to MARRIAGE and AGES of MALES and FEMALES returned as BLIND, DEAF and DUMB, DEAF, LUNATIC, and IMBECILE or FEEBLE-MINDED; also of PERSONS suffering from "COMBINED INFIRMITIES"; distinguishing those in each group who had been afflicted from CHILDHOOD, 1901.

NOTE.—"All children under 10 years of age" returned as suffering from an Infirmity are included under the Sub-Section "from Childhood." Persons suffering from more than one Infirmity are included in the several Sections relating to those Infirmities. Thus a Person who was Blind, Deaf, and Feeble-minded appears in each of the Sections so headed. For details see last Section dealing with "Combined Infirmities.

* Of the 15,246 Persons in 1901 classified in the Table as Deaf and Dumb, 770 Males and 598 Females were returned simply as "Dumb," and of these 396 Males and 300 Females are classified as Deaf and Dumb from Childhood.

† The Deaf and Dumb from Childhood are now shown separately for the first time; all children under 10 years of age whether described as "Deaf and Dumb" or as "Dumb" only are included in this Sub-Section (see also previous note). The figures are based on the descriptions given in the Schedules, and must be regarded as incomplete.

‡ The Census Schedule did not require persons who were Deaf without being Dumb to mention the fact of their Deafness, and therefore the figures given for the "Deaf" cannot be regarded as complete.

TABLE XXX.—*continued.*

The BLIND, the DEAF and DUMB, the DEAF, and the INSANE in ENGLAND and WALES.—CONDITION as to MARRIAGE and AGES of MALES and FEMALES returned as BLIND, DEAF and DUMB, DEAF, LUNATIC, and IMBECILE or FEEBLE-MINDED; also of PERSONS suffering from "COMBINED INFIRMITIES"; distinguishing those in each group who had been afflicted from CHILDHOOD, 1901.

* In 1891 the heading of the Census Schedule was "Lunatic, Imbecile or Idiot," and the persons so returned were eventually classed as "Mentally Deranged." In 1901 the heading of the Schedule provided for two categories of the Mentally Deranged, viz., "Lunatic" and "Imbecile, Feeble-minded," and in drawing comparisons from the figures for the two Censuses, allowances should be made for these differences. The figures for 1891 for the new sub-divisions of Mentally Deranged cannot therefore be given. Total "Lunatic, Imbecile, and Feeble-minded," 1901 :—132,654 Persons; 62,063 Males, 70,591 Females. Total "Mentally Deranged," 1891 :—97,383 Persons; 45,392 Males 51,991 Females.

TABLE XXX.—*continued.*

The BLIND, the DEAF and DUMB, the DEAF, and the INSANE in ENGLAND and WALES.—CONDITION as to MARRIAGE and AGES of MALES and FEMALES returned as BLIND, DEAF and DUMB, DEAF, LUNATIC, and IMBECILE or FEEBLE-MINDED; also of PERSONS suffering from "COMBINED INFIRMITIES"; distinguishing those in each group who have been afflicted from CHILDHOOD, 1901.

1900	102,448	15,748	49,445	11,866	25,389
1901	111,585	12,176	57,246	12,310	29,853

NOTE.—The appended Table XXXIII, showing the scope of the respective Censuses in Great Britain and Ireland, in the Indian Empire, and in each of the British Colonies and Dependencies, is extracted from a paper by Mr. R. H. Hooker on "Modes of Census-taking in the British Dominions," and is here inserted by kind permission of the author, and of the Council of the Royal Statistical Society, from whose Journal (Vol. lvii, p. 358) the Table is reprinted. The items marked × in the several columns, indicate those included in the scope of the Census; those marked — being excluded. The items marked with an asterisk (*) are specially referred to in Notes to Part III of Mr. Hooker's paper. In the Canadian Census, the symbol ‡ in column (22) indicates that the Hollerith electrical machine was used in the processes of tabulation. A blank indicates that no information was obtained, or that the Census returns were not complete at the date when the Table was prepared.

LIBRARY OF THE UNIVERSITY OF CALIFORNIA

Tables, &c., for the use of Mathematicians, Surveyors, Engineers, and other Practical Computers.

PUBLISHED BY

C. & E. LAYTON,

56, FARRINGDON STREET, LONDON, E.C.

Works by Major-General ROBERT SHORTREDE, late of H.M. Bombay Army.

Super Royal 8vo., 602 pp., cloth, 30s.

LOGARITHMIC TABLES TO SEVEN PLACES OF DECIMALS, containing Logarithmic Sines and Tangents to every Second of the Circle, with Arguments in Space and Time. *Revised Edition.* With additional Preface and Examples by Major-General HANNYNGTON, F.I.A., F.S.S.

Super Royal 8vo., 306 pp., cloth, 21s.

TRAVERSE TABLES TO FIVE PLACES for every 2′ of Angle up to 100 of Distance. Edited by EDWARD SANG, F.R.S.E.

Super Royal 8vo., 208 pp., cloth, 21s.

LOGARITHMIC TABLES: containing Logarithms to Numbers from 1 to 120,000, Numbers to Logarithms from ·0 to 1·00000, to Seven Places of Decimals; Tables with Centesimal and Decimal Arguments for finding Logarithms and Antilogarithms as far as Sixteen and Twenty-five Places; Tables to Five Places for finding the Logarithms of the Sums and Differences of Antilogarithms; also Tables for Barometric and Thermometric Heights, together with several other Tables of Frequent Use.

Royal 8vo, cloth, 21s. *net.*

TABLES FOR THE FORMATION OF LOGARITHMS AND ANTI-LOGARITHMS TO TWENTY-FOUR OR ANY LESS NUMBER OF PLACES, with Explanatory Introduction and Historical Preface. By PETER GRAY.

Medium 8vo, with Marginal Index, 5s. *net.*

TABLE OF LOGARITHMS AND ANTI-LOGARITHMS (Four Figures) 1 to 10,000. By MAJOR-GENERAL HANNYNGTON.

Super Royal 8vo, cloth, 21s. *net.*

TABLE OF QUARTER-SQUARES OF ALL INTEGER NUMBERS UP TO 100,000, by which the product of Two Factors may be found by the aid of Addition and Subtraction alone. By S. L. LAUNDY.

Royal 4to, cloth, 5s. *net.*

A TABLE OF PRODUCTS, BY THE FACTORS 1 TO 9, OF ALL NUMBERS FROM 1 TO 100,000, by the aid of which Multiplication may be performed by inspection; with an Introduction explanatory of its use, and also of the Method of obtaining the Products of Numbers exceeding the limits of the Table. By S. L. LAUNDY.

Royal 8vo, cloth, £2. 2s. *net.*

TABLES OF COMPOUND INTEREST, for each rate between ¾ and 10 per Cent. per Annum, proceeding by Intervals of One-Eighth, and from 1 Year to 100 Years.—I. Present Value of £1.—II. Present Value of £1 per Annum. — III. Amount of £1. — IV. Amount of £1 per Annum. By LIEUT.-COL. W. H. OAKES, A.I.A.

Super Royal 8vo, cloth, 21s. *net.*

TABLES OF THE RECIPROCALS OF NUMBERS, FROM 1 TO 100,000, with their Differences by which the Reciprocals of Numbers may be obtained up to 10,000,000. By LIEUT.-COL. W. H. OAKES, A.I.A.

Imperial 8vo, cloth, **10s. 6d.** *net.*

TABLES FOR FINDING THE HALF-YEARLY RATE OF INTEREST, FROM $1\frac{1}{4}$ PER CENT. UPWARDS, realised on **Stock or Bonds,** bearing $1\frac{1}{2}$, $1\frac{3}{4}$, 2, $2\frac{1}{4}$, $2\frac{1}{2}$, $2\frac{3}{4}$, and 3 per Cent. Half-Yearly Interest, issued at any Premium and redeemable at Par in any number of Half-Years not exceeding 60. By LIEUT.-COL. W. H. OAKES, A.I.A.

Demy 8vo, cloth, **£1. 11s. 6d.** *net.*

LOANS PAYABLE BY DRAWINGS AND DEBENTURE INTEREST TABLES. By LIEUT.-COL. W. H. OAKES, A.I.A.

Royal 8vo, with Index complete. Half-calf, **£2. 2s.** *net. New Edition.*

TWO TABLES OF LOGARITHMS TO NATURAL NUMBERS, and Natural Numbers to Logarithms, for all Numbers from 1 to 99,999, and all Logarithms from ·00001 to ·99999; arranged so that the Logarithm or Number required is at once obtained correctly to Five Places of Decimals, by means of a Marginal Index, and without Reference to Tables of Differences in any case. By E. ERSKINE SCOTT.

Royal 8vo. Price **10s.** *net.*

A SHORT TABLE OF LOGARITHMS AND ANTI-LOGARITHMS TO TEN PLACES, in Two Parts, whereby the Logarithm of any Number to Ten Places of Decimals, and the Number corresponding to any Logarithm to Ten Places of Decimals, may be readily and correctly found, to which is added a Complete List of Constants, with Formulæ for their Application. By E. ERSKINE SCOTT.

Demy 8vo, 76 pp. Price **7s. 6d.** *net; with Marginal Thumb Index,* **12s. 6d.** *net.*

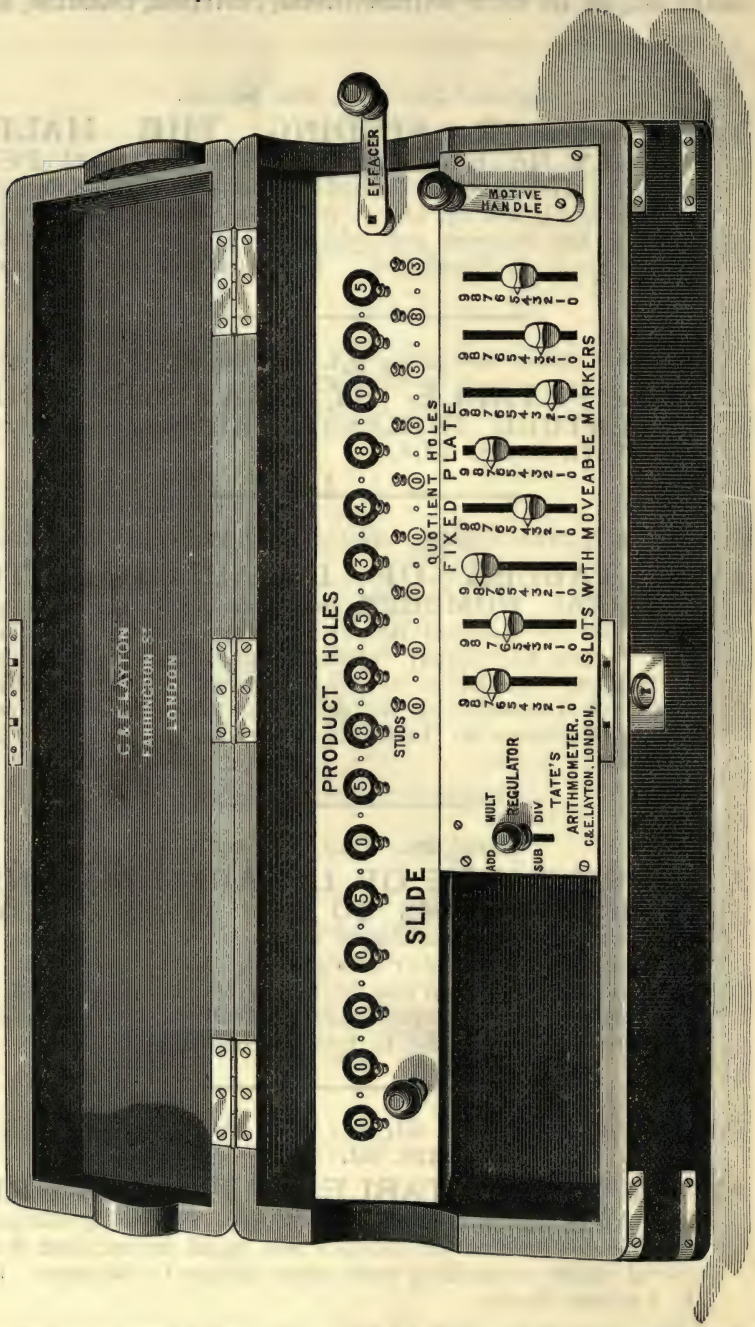
AN IMPROVED TABLE OF FIVE-FIGURE LOGARITHMS, arranged with a view to securing the best possible combination of accuracy and speed in use, and with special regard to avoiding unnecessary fatigue to the eyes. By E. ERSKINE SCOTT.

"I have much pleasure in saying that since I received my Tate's Arithmometer in 1888 it has never been in the smallest particular out of order, and it is working now as perfectly as when it was new."—GEORGE KING, Esq., Vice-President Institute of Actuaries.

TATE'S IMPROVED ARITHMOMETER.

SOLE MAKERS: C. & E. LAYTON, 56, FARRINGDON STREET, LONDON.

PROSPECTUS ON APPLICATION.



PRICE (IN LONDON) OF ORDINARY SIZE MACHINE GIVING 16 FIGURES IN PRODUCT .. 50 GUINEAS.

12, 14 and 20-Figure Machines are also made specially to order.

"The Tate's Calculating Machine furnished this Department by you in 1885 has been, since that time, and is now, used almost constantly, and has given the best possible satisfaction. It has never needed repair, even to the replacing of a broken spring, and, from present appearance, is likely to work well for several years to come."—*Insurance Department, State of New York.*
